

ABOUT GARMENTS

DURABLE DESIGN, CONSCIOUSLY CREATED.

High visibility clothing must conform throughout its lifecycle and so mending or reusing is not possible. A recent trend to reduce price has led to lower quality products on the market; this combination poses a significant environmental issue.

An EcoViz® garment represents the combination of designing with product longevity and durability in mind, with the use of environmentally conscious choices on fabrics and components.

All virgin polyester has been replaced with polyester made from recycled plastic bottles, offering considerable savings on CO₂ and energy emissions without compromising conformance, performance, or appearance

With the entire range now transitioned to EcoViz®, every single Leo® garment reflects our dedication to both wearer protection and environmental stewardship.

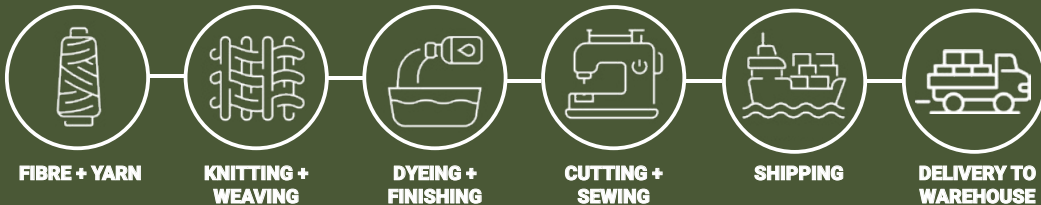

ABOUT GARMENTS

KNOW YOUR IMPACT

An LCA (or Life Cycle Assessment) is a scientific assessment of the potential environmental impact of a product during its entire lifecycle

Working with Green Story, 2024 sees the results of lifecycle assessments on over 100 Leo Workwear EcoViz products.

This will provide 3rd party verified saving figures, in line with ISO 14040:2006 and ISO 14044:2006 standards.

Through MyLeoWorkwear.com, customers will be able to see the savings per product and per order.

Positive impact of this product

6882 grams of CO2 emissions avoided	5.96 kWh of energy conserved	0.31 kgs of waste diverted	11.09 litres of water saved
